

# Implantable Medical Plastic Parts

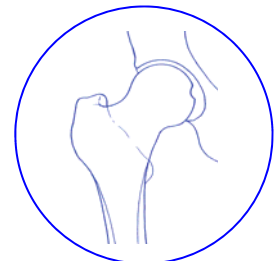

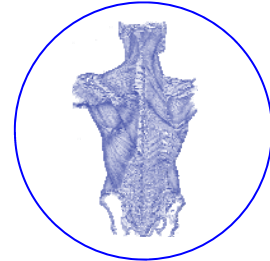

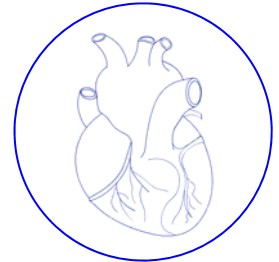

EPI has taken its considerable 45 years of plastic machining experience and applied it to the complex geometry, quality assurance, and cleanliness requirements of short- and long-term medical implants.

Working with materials like PEEK, UHMWPE, and other high performance thermoplastics, we craft close-tolerance medical devices, parts, and assemblies to your specifications.

EPI devotes its resources and experience to fulfilling important implantable device requirements like surface finishes, residual mechanical stress, material purity, cleanliness in handling and packaging, component serialization, traceability, and machining expertise.

Work with EPI for dependability, quality, precision, and materials knowledge.
